

Abstract

The present invention relates to a system and method for saving an image file to a network folder. The present invention enables users to specify access information for an image file, gives users greater flexibility in choosing a network folder as a destination for the image file, and reduces administrative workload in providing user access to the network folder. Generally, the present invention is directed to a system and method for saving an electronic image file to a network folder and comprises an image file to be saved; specifying means for specifying file access information; and associating means for associating the file access information with the image file to be saved, wherein as a result of the associating an access-restricted file is thereby created.
